Final Project Critique

Project Title: Vehicle Fuel Economy Data

Reviewee's Name: Justice Nii-Ayitey

Reviewer's Name: Abhinav Prabhu

Coverage of 3 course areas: Justice covered the Classification and Regression parts where he implemented many models. He was also well prepared on the analysis which he wants to implement in clustering and association.

Dataset size: Dataset which Justice used is huge in size where he has 39000+ observations and approx. 100 variables. I think this dataset is big enough to proceed and perform analysis.

Relevancy: This dataset is unique.

Difficulty: I didn't find any difficulty.

Interestingness: Fuel management is a major crisis in many parts of the world. Hence, I felt this dataset to be more interesting and it will also be very useful if a complete research is done in real time.

Clarity: In general, the way Justice presented the topic was very clear, but it was a bit confusing when he explained about the target variable in classification analysis.

Originality: The target variables and the methods which Justice followed were unique and good.

Creativity: His ideas regarding the fuel economy and utilization was good.
